

# SwissSalary NSP®

## Payroll Software for Public Administration

For over 15 years now, SwissSalary has been the payroll software for Swiss companies with 10 to over 5,000 employees. Based on the established ERP solution Microsoft Dynamics NAV and with the latest swissdec 4.0 and Certified for Microsoft Dynamics (CfMD) certification, SwissSalary has the highest possible accreditation Microsoft has to offer.

### More Than 800 End Customers, Over 60 Partners

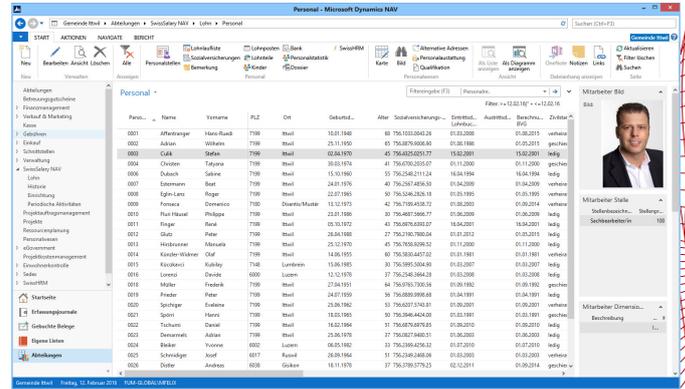

SwissSalary is available in 4 languages (GE, FR, IT, EN) and, therefore, can be used throughout Switzerland. Long-term project experience and the ideas of more than 800 of our customers are gathered in the continuous development of the solution. We also work with more than 60 partners in Switzerland and Europe altogether. Dedicated specialists guarantee a comprehensive service starting from the installation and training through to the ongoing support.

### Payroll Software for Public Administration: SwissSalary NSP®

SwissSalary NSP® is the payroll software for public administration in cantons, cities and municipalities, which fully integrates with the industry solution 'new system® public' by our partner Information Technology & Trust AG. On the one hand, with SwissSalary NSP® you will benefit from more than 15 years of experience, on the other hand, you can already fulfill your specific requirements of cantonal, city or municipality financial management within the standard scope of payroll software.

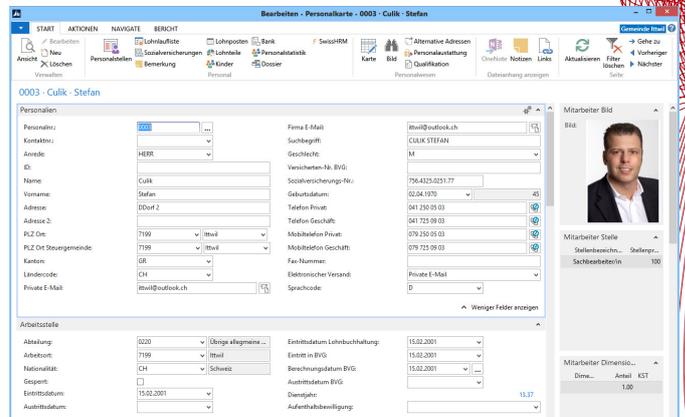

### Efficient Staff Management

The clearly arranged personnel master data in SwissSalary NSP® with personal details, payroll data, assignment to social and private insurance, payment details and all relevant accounting and assessment information simplifies employee administration. Entitlements for vacation, holidays and time worked in advance are stored according to your staff regulations, age or years of service. Manual controls are reduced to a minimum. The joining / resignation processes are also fully automated

### Employee List

All relevant information is available in SwissSalary NSP® at a glance, while the most important work processes can be started with a single click of a button.

### Staff Card and Qualifications

Owing to the integrated personnel information system, you can quick and easily store all employee's data to have optimal support in your processes.

## Handling of Multiple Appointments

Even the standard edition of SwissSalary NSP® can handle multiple appointment per employee. This comes into play when a person performs several functions simultaneously, and under certain circumstances they are paid and insured differently.

## Individual Payslip

The payroll run can be customized at any time. Whether there is an advance pay followed by final pay process or only one single payment per month, you determine the payment cycle. With the assignment of employees to payroll areas, multiple pay processes per month are created simultaneously. The settled pay process can be canceled any time before the posting time or temporarily cached for later processing. The payslip is personalized with supplementary texts or personal information for all or individual employees.

## Posting in Accordance With the HRM2 Chart of Accounts

SwissSalary NSP is based on newsystem® public in the chart of accounts of financial accounting, regardless whether HRMI or HRMII is being used, and is capable of posting wage costs to the predefined accounts with a mouse click.

## Standardized Interfaces

By default, SwissSalary NSP® already features interfaces to external systems like teacher wage payment, arrow pay rise tool, as well as systems of occupational pensions for public administrations.

Furthermore, you can use the following default features of SwissSalary:

Powerful Wage Recording

Comprehensive Reporting

Withholding Tax and ELM Submission

## newsystem® public: The Comprehensive Solution for Cantonal Fiscal Authorities, Cities and Municipalities

Since its launch in 2012, 5 cantonal fiscal authorities and 80 municipal councils have successfully migrated to newsystem® public and used this comprehensive solution in daily, productive operation. Together with the installations existing for a long time, the list of satisfied customers of Information Technology & Trust AG includes today more than 100 authorities throughout Switzerland.

newsystem® public is a comprehensive solution for public administration based on the pioneering technology of Microsoft Dynamics NAV. Whether it is residents registration, billing or functionally comprehensive finance and accounting that includes payroll and personnel information system, newsystem® public meets the requirements of a fully integrated and modern comprehensive application for administering small, medium and large towns or municipalities, and cantonal fiscal authorities. This contemporary technology provides an elegant integration of third-party applications. The overall concept of newsystem® public has the right solution even for integrated applications like eGovernment, Creditor Workflow or Municipality Cockpit.

The team of 35 employees of Information Technology & Trust AG are focused on comprehensive IT solutions for public administration in Switzerland. Strong partners complement the perfect, forward-looking overall product offer for public administration with their products and services.
